

TAMU CAT

Example Reports

Companion to the Software Overview & User Guide

1. Cohort-level summary for direct assessments: every student in one track and program year
2. The two sources of data behind it, including a look at faculty data on the way in
3. What an advisor sees once a student finishes
4. A student's own portfolio report

All data in this document is synthetic. To respect student privacy, every name, identifier, and score shown was generated by the system itself for demonstration purposes; none of it is a real student record.

Master of Health Administration, Texas A&M University, School of Public Health

EXAMPLE REPORT 1

Cohort Summary

Direct-assessment summary for every student in one track and program year, aggregated across every competency. Generated directly from TAMU CAT's reporting tool, no manual assembly.

The two sources of data

Every competency shown in a TAMU CAT report is built from up to two independent sources. Reports never blend them into a single number: both are shown side by side, so a reader can see where each rating came from and where the two sources agree or disagree.

Source	Who provides it	How it enters the system
Student self-assessment	The student	At each program checkpoint (initial, midpoint, final), the student rates their own progress on every competency on a 1–5 scale (Beginner through Mastery) and can add a short written reflection. Submitted directly in TAMU CAT.
Course-derived evidence	Faculty, via the admin team	Faculty grade coursework as normal in their own gradebook. The admin team imports an export of those grades; TAMU CAT maps each graded assignment to the competency (or competencies) it was designed to assess, at a target level the course defines, and produces a derived 1–5 competency rating per student.

A student's self-rating and the course-derived rating are frequently different, and that is expected and by design. A gap between the two is exactly the kind of signal an advisor is meant to raise with the student during their next meeting: it may mean the student is being modest, overconfident, or that the course simply hadn't reached that competency yet when the self-assessment was taken.

Advisor scoring is not a third data source in reports. Advisors do add their own written feedback per competency, which becomes visible to the student once the advisor submits it. Meeting recaps and confidential notes stay advisor- and admin-only and are never shown to students. Either way, this is guidance and context, not a third competency rating averaged into program-level numbers. Cohort and trend reports are built only from the two sources above.

The cohort report on the previous page is built entirely from these two sources, aggregated across every student in a track and program year. The pages that follow show each source individually: first what the faculty-supplied data looks like once imported, then what an advisor sees once a student has completed their side.

Faculty data, as imported

Faculty hand off a single course grade file (a Canvas Learning-Outcomes export, or a simple spreadsheet mapping each assignment to a competency and target level), and the admin team’s Grade Import turns it into row-level competency evidence for every graded student, with no new account or workflow required of the instructor. The screenshot below is the admin’s view of one completed import batch, showing how many rows were matched, and how each course performed against its own target level per competency.

FACULTY IMPORTS

Grade Import Batch #29

Committed batch uploaded by westerman@tamu.edu for Spring 2026

Back to batches

Course-derived ratings from this batch are reportable for **Spring 2026**. Pending rows need student identifier reconciliation before they contribute to derived ratings. Duplicate rows are recognized by import fingerprint; when the same source row already exists, the row is shown in diagnostics and skipped instead of imported again.

COURSE COMPETENCY REVIEW

Actual vs Course Target by Competency

Use this to review what each course contributed and whether assessed levels met the uploaded course targets.

COURSE	COMPETENCY	ROWS	ACTUAL AVG	ACTUAL RANGE	COURSE TARGET AVG	TARGET RANGE	MET	BELOW TARGET	NO TARGET	MET RATE
PHPM-601-700	Delivery, Organization, and Financing of Health Services and Health Systems	50	3.56	2-5	3	3-3	42	8	0	84.0%
PHPM-601-700	Policy Analysis	50	3.46	2-5	3	3-3	43	7	0	86.0%
PHPM-601-700	Public and Population Health Assessment	50	3.4	2-5	3	3-3	38	12	0	76.0%
PHPM-601-700	Ethics, Accountability, and Self-Assessment	50	3.44	2-5	3	3-3	42	8	0	84.0%

Admin view of a completed grade import batch: 1,700 rows across 12 course files, matched automatically, shown against each course’s configured target level. (Synthetic demonstration data.)

What advisors see once a student is done

Once a student submits their self-assessment, their advisor is notified. The advisor's review page shows the student's self-rating for each competency next to any course-derived evidence already on file for that same competency, along with the program's end-of-program target level. The advisor can add written feedback per competency, which becomes visible to the student once the advisor submits it; meeting recaps and confidential notes stay private to the advisor and admin team.

SECTION

MHA Competency Self-Assessment

Please review each of the 17 competencies that make up the MHA Competency Model and determine your level of proficiency (achievement) at this point in your program. Please note that the (end of the) Program Target level is provided for each competency to assist you in your self-assessment and a comment section is available to record a note to your Faculty Advisor. A note should be provided if your self-assessment is below or above the target course level (see course syllabi for course targets). Refer to the sidebar for a description of the 1-5 proficiency scale.

REFERENCE

Rating Scale Reference

Mastery (5)

- The student is a recognized authority and a leader who can shape professional practice.
- They demonstrate extensive knowledge of current trends and complex theories.
- They can pioneer new solutions and troubleshoot complex, non-routine problems.
- They function with complete independence and contribute to strategic-level decision-making.

Experienced (4)

- The student has a strong, well-developed skill set and can apply complex theories in their professional practice.
- They have a deep understanding of core concepts and specialized theories and can articulate nuances to others.
- They independently apply theoretical knowledge to solve real-world problems with minimal to no guidance.

Capable (3)

- The student has a practical, working grasp of the professional area and can perform standard tasks independently.
- They possess foundational knowledge and skills and can complete a range of standard job tasks.
- They can work without assistance on most routine assignments and effectively participate in team projects.
- They reliably meet expectations for their position but may need minimal guidance for unusual situations.

Emerging (2)

- The student has a limited, but growing, understanding of professional concepts and requires direct guidance for complex tasks.
- They are familiar with foundational terminology and techniques, but their understanding is limited in scope.
- They can perform basic, simple tasks but their performance does not consistently meet professional standards.
- They operate under close supervision and need frequent checks and clear instructions.

Beginner (1)

- The student has only a basic or superficial understanding with little to no practical experience.
- They have a basic awareness of the topic and can identify core concepts.
- They cannot perform job duties independently, and their performance generally fails to meet expectations even with guidance.
- They require constant and direct supervision for all tasks.

Not able to assess (0) (Advisor Only)

- Advisor only option for cases where a rating cannot be provided.

Advisor reviewing a completed mid-point survey: student self-rating, course-derived evidence and its source course, target level, and a feedback field, shown competency by competency. (Synthetic demonstration data.)

EXAMPLE REPORT 2

Student Portfolio Report

One student's own PDF, combining their self-assessment against the end-of-program target level and the grade-derived rating from imported course evidence. Downloadable by the student (or their advisor) at any time.

Employment Information

Current Employment Status and Details

Q1 Are you currently employed?

☒ **Yes** ☐ No

Last updated: 2026-08-15

↳ If yes, where are you employed? (name and address)

Sample Health System

Last updated: 2026-08-15

↳ What is your title?

Program Analyst

Last updated: 2026-08-15

↳ How many hours per week do you work on average?

35

Last updated: 2026-08-15

↳ How flexible are your work hours?

- ☐ 1 — No flexibility: days per week and hours per day are fixed.
- ☐ 2 — Limited flexibility: limited ability to adjust days per week or hours per day; you must work the total hours per week.
- ☐ 3 — Some flexibility: some ability to adjust days per week or hours per day; you must work the total hours per week.
- ☒ **4 — Flexible schedule: flexibility in days worked or hours worked per week, with limited variation in total hours per week.**
- ☐ 5 — Very flexible schedule: flexibility in days or hours worked each day, including total hours worked per week.
- ☐ Other — Please describe the flexibility of your work schedule.

Please review each of the 17 competencies that make up the MHA Competency Model and determine your level of proficiency (achievement) at this point in your program. Please note that the (end of the) Program Target level is provided for each competency to assist you in your self-assessment and a comment section is available to record a note to your Faculty Advisor. A note should be provided if your self-assessment is below or above the target course level (see course syllabi for course targets). Refer to the sidebar for a description of the 1-5 proficiency scale.
